The Best of IACP Products

Impact Power Technologies selected as number 1 product

This year proliferated with innovative and consideration-worthy products

By Crawford Coates

Trends in law enforcement technology have been pretty clear in recent years (data, video and combinations thereof). But there's much more to it than that. IACP's vendor hall is always a great place to see where we might be headed.

Beyond broad trends, there were several specific products and vendors that popped out of the aisles. The following are definitely worth checking out, whether or not you're in the market currently. Here's where we're headed.

#1 IMPACT POWER TECHNOLOGIES

This one is simply amazing: a battery that replaces radio batteries (Motorola and Harris, specifically) and lasts approximately 48 hours on a single charge, weighing a fraction of the original and lasting several, according to the few agencies that use them, several traditional procurement cycles. Oh, and it costs the same as the equivalent OEM battery.

BOTTOM LINE: Law enforcement has literally lost officers because batteries failed when they were most needed. Not only will this product save you money and time, it might even save lives.
